SUMMARY

I am a graduate of Informatics Engineering from the Indonesian Institute of Technology and Business, one of the leading private universities in Medan City, North Sumatra. Currently, I live in Medan City, a dynamic and growing city. Born on August 2, 2001, I belong to generation Z, a generation that is adaptive to the development of technology and digital innovation. With a solid educational background and strong interest in information technology, I am committed to continuing to contribute to the development of the technology industry, both locally and globally.

I have been in the programming world for over 2 years, with a primary focus on web development since 2022. In addition to web development, I also have interests and experience in UI/UX design, Android development, and robotics. As technology advances, I continue to hone my skills, including as a prompt engineer. In this role, I can provide effective prompts to AI such as ChatGPT, Gemini, and others to speed up my work process, without compromising the quality of the resulting code. Despite using AI, I still maintain high standards in every project I work on, ensuring that the end result remains precise and professional.

My last experience was working in an agency company in Medan City as a Frontend Developer for 5 months. In this position, I collaborated in a team using GitHub for project management. I have also completed 4 websites that have been produced. In addition, my experience as a class president during college has helped me to become more caring and mature, especially in terms of management and leadership in a team.

Currently, my interests focus on deepening web engineering and cybersecurity for future career development.

EXPERIENCE

PT SUMATERA SISTEM DIGITAL – Medan, Indonesia

Front End Developer (April 2024 – August 2024)

- Develop the front appearance of the website to be attractive and comfortable when used and increase sales or target markets. *Komunikasi dan bekerja sama dengan Ceo, pemilik bisnis, Backend dev, Ui/Ux, dan Project Manager.*
- Conduct an analysis before starting the development process to see whether it is in accordance with the business objectives desired by the owner and Ui/Ux adjustments.
- During my time working here, I have released 4 projects, 2 from Singapore and 2 from Indonesia.

FREELANCER – Medan, Indonesia

FullStack Developer (may 2022 - june 2022)

- Creating, Designing and Planning a Counseling Website Student assignment, here I made it without a Framework, only HTML, CSS, JavaScript, PHP, and SQL.

PROJECT

BACK OFFICE LOPECTECH – NextJs dan TailwindCss

- I worked on the Lopectech Backoffice project using JavaScript technology. In this project, I collaborated with the backend team using Laravel, as well as working with business owners, agency CEOs, and UI/UX designers.
- This website is made for admins to add, edit, and delete products. In addition, this website also allows the marketing team to view sales algorithms, plan ads, and create ads to be displayed on the front page of the website.

WIN 81 AUTOMOTIVE – NextJs dan TailwindCss

- I created this website using TailwindCSS and Next.js. This website is static without a backend, so all the necessary data, such as product photos and descriptions, are input directly into the code. Therefore, only developers can add, edit, or delete products.

OTHERS PROJECT

- I have various projects from various frameworks AngularJs, JQuery, CodeIgniter and others.
- I can't write all my projects here, so I have prepared a link to access my Portfolio which can be scanned below or if you can't, please access the Web Link above, thank you.
